

PASOS A SEGUIR PARA ENTREGAR LOS TRABAJOS PRACTICOS

Este documento describe los pasos a seguir para poder realizar la entrega de los trabajos prácticos de Programación II/Laboratorio II.

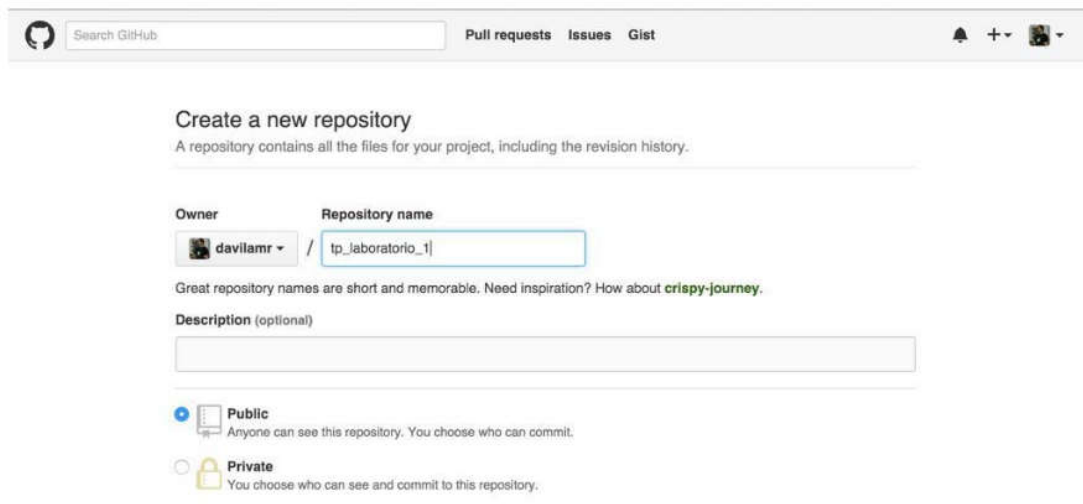

CREAR USUARIO Y REPOSITORIO

Paso 1: Crear un usuario de GitHub

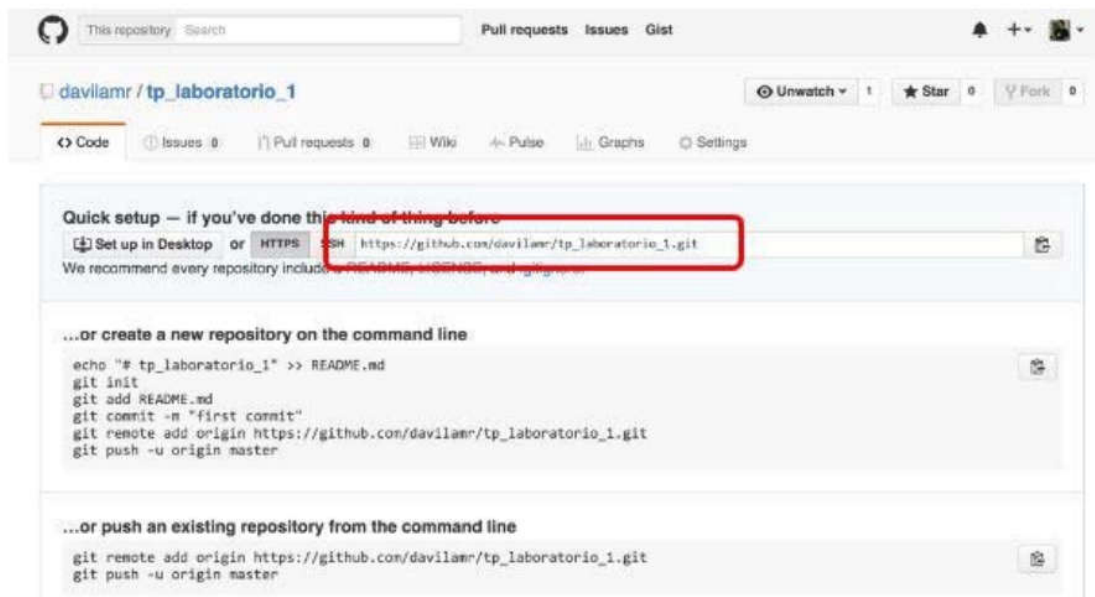

The image shows the GitHub sign-up page. At the top, there are navigation links: Personal, Open source, Business, Explore, Pricing, Blog, Support, Sign in, and Sign up. The main heading is "How people build software". Below it, a text says "Millions of developers use GitHub to build personal projects, support their businesses, and work together on open source technologies." On the right, there are three input fields: a username field with "drSheldonCooper" and a green checkmark, an email field with "drSheldonCooper@gmail.com" and a green checkmark, and a password field with "*****" and a green checkmark. Below the password field, a small text says "Use at least one letter, one numeral, and seven characters." There is a green "Sign up for GitHub" button. At the bottom, a small text says "By clicking 'Sign up for GitHub', you agree to our [terms of service](#) and [privacy policy](#). We'll occasionally send you account related emails."

Paso 2: Crear un repositorio llamado **tp_laboratorio_2**

The image shows the "Create a new repository" page on GitHub. At the top, there is a search bar and navigation links: Pull requests, Issues, Gist. Below the search bar, there is a heading "Create a new repository" and a subtext "A repository contains all the files for your project, including the revision history." There are two input fields: "Owner" with a dropdown menu showing "davi1amr" and "Repository name" with a text box containing "tp_laboratorio_1". Below these fields, a text says "Great repository names are short and memorable. Need inspiration? How about [crispy-journey](#)." There is a "Description (optional)" text box. At the bottom, there are two radio buttons: "Public" (selected) and "Private". The "Public" option has a subtext "Anyone can see this repository. You choose who can commit." The "Private" option has a subtext "You choose who can see and commit to this repository."

PASO 3: Copiar el enlace al repositorio.

Quick setup – if you've done this kind of thing before

Set up in Desktop or **HTTPS** **SSH** `https://github.com/davi1amr/tp_laboratorio_1.git`

We recommend every repository includes a README, LICENSE, and .gitignore.

...or create a new repository on the command line

```
echo "# tp_laboratorio_1" >> README.md
git init
git add README.md
git commit -m "first commit"
git remote add origin https://github.com/davi1amr/tp_laboratorio_1.git
git push -u origin master
```

...or push an existing repository from the command line

```
git remote add origin https://github.com/davi1amr/tp_laboratorio_1.git
git push -u origin master
```

INFORMAR EL USUARIO Y EL REPOSITORIO

Paso 1: Abrir el mensaje
